A: In the definition of the recursion relation (i.e., Eq. (5) in the above answer), the authors write  $A(m)$  instead of  $A_m$ . This corresponds to a change in notation in the final lines of the proof (just replace  $A(m)$  by  $A_m$ ). The solution to the recursion relation above is  $A(m)$  a1d647c40b

Notification of a consensus - domp Hello hackers,I just noticed that there are a lot of discussions and changes in the draft of Python 2.7, and a lot of votes...Today I realized that the Draft is not already implemented and there is a lot of work that would be done in the future if we had a consensus.So I'm thinking that if there is a consensus on what to implement, there is an advantage to start sooner (we have more people working in the same direction).But this may not be a great idea if you think it is better to start implementing in the next version.If this is not the case, could we vote here to notify a consensus?Thank you.P.S: I know we can vote on the draft directly, but I think it is easier to understand the decision if we are going to vote on what to implement.Edited: I wanted to say "You can vote on the draft directly but I think it is easier to understand the decision if you are going to vote on what to implement." ===== tptacek But the draft itself is a consensus. ~~~ domp Ok then, sorry for thinking you are implying it. Multi-CAD: When you're working with multiple.CAD files, CAD Cloud provides a new option for how you store and manage your settings: You can now save settings in the cloud that are available to any drawing that you open. CAD Cloud also works with CAD Cloud Access, so that you can work with two or more files in separate accounts. You can even access files in CAD Cloud from your desktop or mobile device. You can now share individual or groups of drawings with a URL. Sharing a URL is like sending a drawing as an email attachment, so you can also attach text, designs, and drawings that you create or import. You can share drawings through a web service. This lets you send drawings to clients, partners, or anyone with a web browser and a working email address. You can set up your own FTP server and send drawings over the Internet.
