Development of AutoCAD In May 1982, after 3 years of research, development, testing, and refinement of the existing draftspersonsCAD system, Autodesk introduced a "small computer on a desk" called the "AutoCAD Concept". The system allowed users to perform all the functions of a commercial drafting system on a personal computer with an internal, low-cost graphics processor. The system was designed to be used by non-draftspersons and by companies that were already doing drafting but were restricted in terms of the applications they could use. It was a revolution in CAD! Not long after the release of AutoCAD, it became obvious to Autodesk that the system would not be successful if it was not highly configurable. Thus, the system gained the ability to learn from the user. Each new user would bring their own set of skills and preferences to the system, and AutoCAD would learn what these skills and preferences were. The system would then be able to combine the preferences of multiple users in a unique way to solve problems and complete projects. The system also gained the ability to create and communicate paper drawings automatically. Since drawing tables were the main form of documentation in the drafting business, the ability to easily draw these tables on paper, then convert them to drawings, was important. The ability to translate one into the other automatically also brought significant productivity gains. The AutoCAD Concept was also an indirect tool for Autodesk to promote the development of AutoCAD. It was easy for Autodesk to develop the technology for the Concept, since it was already in use by several hundred people. Thus, Autodesk could then use its AutoCAD system to drive development of the next generation of their CAD system. Autodesk Marketing philosophy Marketing the AutoCAD Concept Autodesk was the sole developer of AutoCAD, and it was highly successful. But the company was small, and there were only around 600 employees in its marketing department, a tiny fraction of the workforce in the company. Autodesk needed to spread awareness of the system to other groups within the company. It did this through two major marketing efforts: The Concept was presented to Autodesk's salesforce at the company's annual sales meeting. Everyone in attendance was able to play with the system, and the Marketing team monitored the number of attendees who became new users of the system.

U.S. proposes U.N. probe to end 'human rights abuses' in Venezuela - antr ===== theprotocol If there are any Venezuelans in the community here, what's the assessment of Venezuela's reputation from the community and the press? And what about other Latin American countries that U.S. and their allies tried to destabilize? I feel bad for the Venezuelan people, and I think Maduro is a bad president, but I don't get why this country is held to such high standards. ---- dang [ ---- theprotocol That was a pretty good answer. Thanks! ----- Someone If one of the countries mentioned in the title is the United States, it should be 'The United States would like to end human rights abuses in...' ----- Doctor\_Fegg As an Australian, the headline I'd expect to see is something like "US wants...", because I don't think there's any legal requirement for the UN to do this. The US State Department, through the USAID has been pouring money into the country for many years to "stabilise" Venezuela, so the title is pretty deceptive. ---- samvher This was made by the US Government. They have the right to request these things to be investigated, and if they can find one in the country, they should be investigated. ---- Doctor\_Fegg I don't think the UN has the power to send the ICRC to Venezuela. In any case, the UN has a pretty loose remit. The UN Charter requires the members to cooperate with one another [1], but gives the UN wide discretion to oversee that a1d647c40b

Infantile spasms (IS) are a major cause of mortality and morbidity in children with epilepsies. To determine the prevalence and the underlying etiologies of IS in children with cerebral palsy (CP) and epilepsy. This cross-sectional study included 42 children with CP and epilepsy. The International Statistical Classification of Diseases (ICD-10) criteria for IS were used for diagnostic criteria, including video-polygraphic recordings. Prevalence of IS in this cohort was 7.14% (95% confidence interval [CI], 3.33-14.15%). IS were present in 21 of 50 children with CP (42%), in 11 of 23 with epilepsy (48%), and in 7 of 11 with CP and epilepsy (64%). Etiology of CP was idiopathic in 31 of 42 children (74%), and acquired in 11 of 42 (26%). In patients with epilepsy, the most common etiology was hippocampal sclerosis (HS) (10/23; 43%), and in those with CP and epilepsy, HS (6/11; 55%) and West syndrome (WS) (5/11; 45%) were the most common etiologies. The risk of IS was higher in children with epilepsy (relative risk [RR]: 6.54; 95% CI: 2.10-20.37), CP (RR: 10.54; 95% CI: 2.03-55.79), and CP and epilepsy (RR: 15.06; 95% CI: 2.50-89.45). Infantile spasms in children with epilepsy, CP, and CP and epilepsy are associated with different etiologies. The underlying etiology of the cerebral palsy is important for predicting
