Advanced COM Port Redirector is a software that allows you to enable complete data stream redirection from the specified COM port to any virtual one (including RTS, CTS, DSR, DTR and Ring signal lines duplication). While this program does not allow you to redirect the general port data - such as keyboard and mouse data stream - you have to adjust settings in order to handle other matters. When data is sent to the forwarded port, Advanced COM Port Redirector translates the data stream into ASCII-compliant characters. The application may also convert other formats of data streams, such as binary data, into ASCII or Unicode format. Then the forwarded data may be sent through a network. Advanced COM Port Redirector is also able to route serial data through ISDN cards. However, it is not reliable and functional under all Windows OS versions and serial port drivers.
