rQ: How to get theme_style for buttons in drupal
8 I am developing one app in which I am using a
theme and I have used a simple button as
follows Now I want to know the theme for that,
and how to get it so that I can use it in my drupal
theme. A: We can use
\$variables['element_attributes'] for example to
access the variables we are using: 'link', '#title'
=> 'Click', '#href' => "#", '#attributes' => [
'class' => ['social-status-btn'], 'id'
=>'social_status_btn'], '#attached' => ['library'
=> ['element_attributes', 'form'], 'callback' =>
[__NAMESPACE__ . '\Plugin\Form\Element\Button'
=> [], 'form_button_attributes'], 'position' =>
['element_attributes'],],]; ?> Now we have

```
array(6) { ["#type"]=> string(5) "link"  
["#title"]=> string(16) "Click" ["#href"]=>  
string(1) "0" ["#attributes"]=> array(2) {  
["class"]=> array(2) { ["social-status-btn"]=>  
array(4) { ["#value"]=> string(
```
