The Paths tool creates shapes from freehand drawing or from vector shapes that can be used to create a desired effect. These shapes can be edited and manipulated. The Gradient tool allows you to paint the background of the image with a gradient. They can be created using multiple colors, or using multiple gradient stops, that control how the color appears in the transition. The Liquify tool is most commonly used for smoothing, warping and distorting an image. It can create a 3D look, or create cool effects that can be applied to a photo or vector image. The Eraser Tool can be used to create the same sort of effects as the Eraser brush from previous versions of Photoshop. It is good for removing paint, for example, or drawing off an unwanted object from a photograph. The Zoom tool is good for enlarging or reducing images. It can be used to examine an object or image more closely, for example to reveal problems that weren't detected during the original photo shoot. The Hand tool is best for creating a new artwork. You can draw directly in the image using the graphics tablet or stylus, and then choose from a variety of options in the Tool Options window. The Crop Tool is useful for selecting just the portion of an image that you want to include in a new image. You can use the Crop tool to select and delete objects from the background of a photo, or create an entirely new image from the same area. It's also good for repositioning objects in the
