AutoCAD is the successor to the AutoLISP desktop app released in 1981. AutoCAD still uses AutoLISP, a high level scripting language that is both human-readable and human-writable. Many of the AutoCAD features that were not available in 1981 are still missing, including the ability to draw freehand with the Line tool, measure with the Scale tool, and edit text with the Text tool. For those reasons, it is recommended that users purchase AutoCAD LT and AutoCAD 2007. These versions of AutoCAD use native Windows programming, and thus have many features that are not available in AutoCAD for other platforms. However, the 2012 versions of AutoCAD and AutoCAD LT include many more features that are not available in any other version. AutoCAD can be used for many different types of drafting and drawing tasks. However, most AutoCAD users are familiar with the various drafting features of the application, and we will focus on these features in this tutorial. Licensing for AutoCAD AutoCAD is sold as a perpetual subscription, and the first year of the subscription is for a limited time. Users can purchase either AutoCAD Standard or AutoCAD LT. The price of AutoCAD Standard is US\$12,000, and AutoCAD LT is US\$8,000. Autodesk announced an upgrade option for users of AutoCAD Standard and AutoCAD LT, but the upgrade is currently not available. AutoCAD is only available to business users. If you are not a business user, you are not allowed to purchase AutoCAD. AutoCAD LT is available to all users and is free, but AutoCAD Standard is available only to business users. AutoCAD Standard and AutoCAD LT are available in desktop and mobile editions. The mobile editions are not available on the desktop and are required for mobile use. If you need to purchase additional licenses, your AutoCAD subscription will be upgraded to the next higher license level if you purchase a license for that level. AutoCAD LT licenses for additional users cannot be upgraded. If you are a business user, you can upgrade your license level at any time. Basic use When you open AutoCAD, the application window displays the following dialog box: AutoCAD presents the following task view in each tab: The System tab provides access to features that are not user

C++ applications and services AutoCAD offers Application Programming Interfaces (API's) for C++ and AutoLISP applications. The C++ API is a wrapper of .NET and provides all the functionality of C++. The API is structured as a set of classes. The classes present the geometry and CAD command interfaces to the rest of the API. These interfaces allow the application to create CAD documents and AutoCAD objects. AutoLISP is the language of choice for AutoCAD extension. AutoLISP programs can be created using the AutoLISP interpreter, as well as integrated directly into a drawing and from the command line. The integrated mode is used to create Autodesk-based extensions for AutoCAD and other products. AutoCAD 2011 offers a C++ Extension Manager to add and delete C++ extensions. AutoCAD 2010 offers an Extension Manager to add and delete AutoCAD extensions. A list of registered C++ extensions can be listed using the Extension Manager. Visual LISP is a simple programming language for application extension. A Visual LISP program consists of LISP source code, which is written in a text editor or integrated into the drawing. The program can then be debugged. Visual LISP is closely related to Visual Basic and Visual LISP itself is built on top of Visual Basic. AutoCAD Architecture is a plugin for AutoCAD. It allows users to create and edit architectural floorplans in the AutoCAD environment. The plugin is included with AutoCAD and the C++ extensions. The plugin is available for Windows, Linux and Macintosh operating systems. AutoCAD Architectural contains an editor for different building types, an engine to generate 2D and 3D representation of building types and constraints, as well as building types, flooring, and parts. It provides a fast and user-friendly way of creating and editing floorplans and building plans. AutoCAD Architecture Professional contains the same features as AutoCAD Architectural, but allows the user to design buildings in 3D and create 3D building models. AutoCAD Electrical is a plugin for AutoCAD that allows users to create electrical schematics. AutoCAD Mechanical is a plugin for AutoCAD that

If only Rada had not put the "Not Before" date on it... :( I wonder how many of these things made it into the market before the end of Q1. It's funny, I thought April 2011 would have been the target date, but it looks like June 2011 was the number 1. That's a tight window to get it done! I guess so far nobody has done a pre-order.. just given back their deposit. Looking at the configuration it looks like it's for use as a baby-monitor, but has the unique feature that it can receive a video feed from a PC which means it could be an answer to those parents who don't want to buy a separate video monitor. [edit] Anyway, back to the action... looks like we're on for a bit of a wait! If this is the case, I'll go out for a bite to eat and pick up some supper for the night. Sounds like everyone is going to be busy too! Well.. at least somebody from MC10 is sleeping... just read through his posts (not my role) and a few messages on the IRC and noticed he was online this morning. Looks like he managed to catch some Zzzzs before the May 1st launch! Just had a quick peek around the Rastus site, and it looks like we're all going to be busy again for a few more hours. Also, check out the new guys on the
