In this article we conceptualize the role of the pharmaceutical agent in the human body using the perspective that human behavior is shaped by the technologies used to create or inhibit its actions. First, we review the history of the discovery and development of pharmaceutical drugs and antibiotics, to illuminate the use of human ingenuity in the face of challenges to ensure patients can be provided access to a range of therapeutic choices. Second, we describe the emergence of the concept of the microbiome, which has created the need for a range of new drugs to address its role in human physiology and disease; further, we highlight the risk of inappropriate use of these drugs. Third, we discuss our case studies to illustrate how innovation and risk-reduction are human-centered and, in the case of pharmaceuticals, are linked to the use of emerging technologies. Fourth, we identify opportunities for management of risk and risk reduction, and finally, we highlight the need for new innovations in outcomes research that links public health and the pharmaceutical industry as partners.Thank you!
