An investigation of the relationship between ploidy, S-phase and prognosis. DNA histograms and nuclear morphometric parameters were obtained from flow cytometry analysis of the nonhomogeneous cellular suspensions isolated from 25 human uterine cervical carcinomas. The ploidy and S-phase values obtained by flow cytometry correlated well with results from conventional Feulgen- and auramine-rhodamine-stained, histologically well-defined archival slides of the tumor material. A semiquantitative flow cytometric analysis of the fluorescence intensity of the tumor cells in the cell cycle phases G1, S and G2 plus M suggested a preferential DNA breakage, most probably in the S phase. By using a combination of ploidy, S-phase values and nonparametric statistics, no statistically significant correlations could be found between the subcellular DNA indices and other nuclear parameters, including nuclear area, shape index, nuclear area and nuclear volume and S-phase values. In addition, there was no significant correlation between the histological grade and any of the DNA parameters. These results suggest that the probability of successful surgical treatment and prognosis in patients with cervical carcinoma is not linked to the degree of DNA abnormalities.Q: In a WPF Page, how to bind an IsTextInputElement to a UserControl in XAML I have a TextBox and I want a button (lets say a button labeled Next) next to it. If I place it outside the textbox it will have no effect. I want to be able to click the button and change the textbox text. First thing I did was to set an IsTextInputElement to the button: 6d1f23a050
