Opencart Xml Import Pro Nulled Php

hi, i have installed the add/remove/update. plugin. i have a fresh import of open cart 1.4.3.0. i have used the raw xml file and it works fine. i don't see any option for add/remove/update. i have tried with the library.php but it says can't load file. and i have checked permissions and they are fine. please help me. firstly, i have been working with an xml theme based on your opencart and i have been trying to import the products of that theme through the import/export extension but i can't save the products of that theme for my store. it gives the error: "couldn't save the product : the xml file is not valid. invalid tags and attributes found in the data." this is an incredible open source component to your site as it allows you to import products, orders, or anything from an xml file into opencart. i used this component to import my wordpress blog into opencart and everything was great. you can import your existing site and import your products/orders/customers into opencart using this component. this really is a must have for your site. i am importing a wordpress blog that already had products and an entire database of blogs. i am using it in my opencart install in a new theme which is working great. i had a few minor issues that i would like to fix but it is working like a champ. i am happy. i wanted to import products from an xml file. i couldnt figure out how. i ended up finding this open source web utility that was very easy. works great. i tried a few other ones that were very complex and did not work at all. this one will do the trick.
