This app also starts performing crunches very fast after you open the first JPEG and save it. This program has nothing in the way of speed. I use every feature of this program every day and I do not think that there is any use for Photoshop. The features are also outdated. If you want to take a direct "snapshot" of a screen and create a photo of exactly what is on the screen, you'll likely want to use a screenshot utility app to do so. For instance, if you were to take a screenshot on a Windows 10 laptop and save it as a JPG file, you'll see a lot of blue screen distortion and a lot of dark blue. Light blue is much better. Why should you pay for a software package? For one thing, Photoshop is rapidly developed and has a number of constantly updated features. But one of the main reasons is that the people creating Adobe Photoshop are the same people making the Creative Cloud apps, which means it's likely that they take Photoshop very, very seriously. Although the focus for the team remains the editing of images, Photoshop has grown in the past few years to include many application-specific tools. There are plugins that emulate the iOS mobile editing tools, and users can now import video from iOS or export to the iPad. If you're a freelancer, you can now organize your projects and clients in the cloud with a single PSD and access your work on mobile, desktop and web. And if you're running out of disk space, you can move images or folders to Adobe's storage cloud service. If you're an educational photographer, you'll be happy to learn that Photoshop CC is now part of the Adobe Learn program, the new way to learn from the pros.
