Adobe Sensei, a new AI engine for Photoshop, will employ artificial intelligence to enable you to create image-based landmarks, detect and recognize objects, and process historical data to create brand-specific images. The AI can also detect that the photo was taken from different angles and positions, such as from a different angle where the sun is in different locations or on a different day. By inference, it can analyze that the subjects your camera could have missed are not the ones you selected. The magic that happens is powered by Adobe Sensei AI, and it's a new workspace within Photoshop with filters designed to add and refine image edits using simple sliders. It automatically adjusts your image, making it easier to get the right look. It can detect elements in images and then insert those in the image to make edits. For example, with "Crop to Edit," you can crop photos and apply filters to crops to create effects like a vintage look using different filters. Apart from this, what you get for your \$99 a year - or \$400 as a decade's subscription - depends on the version. Photoshop CC 2019 costs \$10 more than the previously \$150-selling version of CC 2018, and does not yet include the new video editing capabilities which Premiere Pro does. The hybrid CC 2020 package will cost \$10 more than the \$240 hybrid that comes with PS CC Elements 2019 for Windows, and both that and Elements 2019/20 for Mac (Opens in a new window) will cost \$50 more than the \$100 boxed version of Elements 2018.
